

InfoHUBX Technology, Endless Applications

IVDT's **Automatic Operational Event Start-Up Kit** is best suited for companies that rely on **mobile equipment, repeatable workflows, safety compliance, and accurate operational data**. Any operation where forklifts and or mobile assets play a critical role can benefit. The IVDT Automatic Operational Start-Up Kit is a cost-effective way to explore any number of critical issues that impact your business without a large-scale investment. Built around the SkidWeigh Plus ED3 and the InfoHUBX a powerful combination that raises the level of productivity and enhances safety.

Just some of the key industries and business drivers that see the strongest value in Automatic Operational Start-Up Kits.

Manufacturing

- Tracks forklift usage, idle time, overloads, and impacts
- Improves production flow and material handling efficiency
- Supports OSHA/WSIB safety documentation and audits
- Reduces downtime caused by misuse or unreported events

Example: Automotive, steel fabrication, paper mills, plastics

Recycling & Scrap Processing

- Captures weight events, impacts, and utilization automatically
- Improves accountability in high-abuse environments
- Helps reduce damage to equipment and infrastructure
- Supports throughput productivity without floor scales

Example: Metal recycling yards, MRFs, waste-to-energy plants

Warehousing & Distribution

- Identifies under-used or over-used lift trucks
- Monitors unsafe impacts and operational patterns
- Reduces labor/operator inefficiencies and congestion
- Automates reporting without operator paperwork

Example: 3PLs, cold storage, e-commerce fulfillment centre

Building Materials & Heavy Industrial

- Handles high-capacity lift trucks and heavy loads
- Records overloads and impacts that shorten equipment life
- Improves safety in rugged, outdoor environments
- Helps justify maintenance and capital decisions

Example: Lumber yards, concrete plants, brick and steel supplier

Designed for mid-size to smaller fleets that are looking for the following

- An affordable retrofit system that connects to any lift truck or mobile vehicle, perfect for mixed fleet with different brands with no bias
- Ease of install, ED3's are installed by any forklift dealer and the InfoHUBX is plug and play
- Provide visual productivity and safety data to the operator to improve overall vehicle usage and safety
- Move away from OSHA manual logs which are unreliable, ignored and are often lost
- The ability to create accountability around safety incidents which are hard to prove or investigate
- Incorporate product weight into a more integrated workflow system with automatic records and or the use of scanners and printers
- Ability to access management operational data without subscriptions, cloud-based telematics charge monthly usage fees
- Total control over data, complete confidentiality with no sharing partners
